As business or organization it is imperative to create a "pest free" environment for both employees and customers. When bugs or pests become part of your daily operation production, customer satisfaction and reputation all become negatively impacted more than you may realize. When your reputation and quality are at stake the importance of pest control becomes a top of mind problem that needs to be dealt with efficiently and effectively.

Over 90% of your customers and employees will not report a bad pest experience, so how are you to know if you have a problem. This is where Freedom Pest Control gets involved to identify and solve your pest problem with an integrated pest management program (IPM).

IPM

(Integrated Pest Management)

The "Green" approach to pest control.

IPM is a pest control strategy that uses various complementary methods that include:

1. Mechanical devices
2. Physical devices
3. Genetic, biological and chemical management

These methods are used throughout the three stages of the process. These stages are prevention, observation, and intervention. An IPM is an environmentally safe approach with the main goal of significantly reducing or eliminating the use of pesticides.

IPM Program Steps:

1. Inspection of all buildings and grounds
2. Sanitation practices reviewed
3. Monitoring program for pests is initiated
4. Repairs performed as needed to prevent pest access
5. Potential pest species are identified and a control strategy is determined
6. Pesticides are applied only when a known pest is present
7. The least hazardous pesticides are used
8. Records are kept of pest activity and control measures
9. Program is evaluated and recalibrated on a regular basis

Initial Commercial Inspection

Roaches/Rodents/Seasonal Invaders are included in monthly service.

Roaches

- Water/moist areas: no drips or standing water.
- Grease areas: degreased and no food scraps
